

Alaska Power Association
2008 Annual Meeting
Barrow, Alaska
August 13-15, 2008

**APA/Steve Pratt
Alaska Energy Plan Development
Issues (and Answers?)**

October 2007

- APA determined it should engage in comprehensive energy planning and policy development for Alaska
 - APA is uniquely situated to facilitate and convene on power issues
 - APA has a membership full of unique energy expertise
- April 2008 contracted with Steve Pratt to provide qualitative and quantitative assistance in the effort

Working With Stakeholders

- Meetings/discussions with
 - Alaska Energy Authority
 - Bristol Bay Native Corp. – BB Energy Planning Efforts
 - Nana Pacific LLC – NANA Region Energy Planning Efforts
 - Alaska Housing Finance Corp - Energy Programs
 - ISER at UAA – Hired by AEA to compile energy data
- APA Submitted comments/testimony in recent special session
- Objectives
 - Add value & expertise to energy planning efforts
 - Focus on Power while cognizant of other energy needs
 - Review, propose, comment on policy choices
 - Develop and Leverage Consensus Where (if??) it exists

Alaska Energy Authority State Energy Plan

- In December, AEA expects to finalize overall long-term energy plan designed to lower the cost of energy in Alaska
 - Focus on best energy sources for each community
 - Power, Heating/Cooking, Transportation
- Projects will likely need to be consistent with adopted plan if state support is requested
- Next legislature meets Jan. 20 - **159** days from today – state budget surplus will be significant
- Power is important, but not primary energy consideration for AEA – APA can keep it moving

What Issues Are Important? Can we agree?

Attachment A

| Electric Power Systems in Alaska: Different Communities Within the State Have Different Short and Long Term Issues | | | | | |
|--------------------------------------------------------------------------------------------------------------------------|--------------------|-------------------|-------------|--------------------|-------------------|
| | Anchorage Issue | Railbelt Issue | Rural Issue | Statewide Issue | Regional Issue |
| High Costs | | ✓ | ✓ | | ✓ |
| Environmental Concerns | ✓ | ✓ | ✓ | ✓ | ✓ |
| Need to Use Energy Wisely | ✓ | ✓ | ✓ | ✓ | ✓ |
| Weak Transmission System | ✓ | ✓ | | | ✓ |
| Reduced Availability of Historical Fuel Source | ✓ | | | | |

Supply-Side Response

Demand-Side Response

- Supply side options
 - New/different production or delivery technologies
 - New/different sources of fuel
- Demand side options (Easiest to implement)
 - More efficient use (e.g. replace old frig.)
 - Substitution/elimination of use (Turn off lights)
- What issues are we trying to solve?
 - Can we agree on policy goals?
 - Can we agree on policy solutions?

Policy Goals - What Do We Agree On?

| | Energy Equality Throughout Region/State | Economically Sustainable w/o long-term subsidies | Environmentally Progressive | Encourage the Wise Use of Energy | End User Price Stability | Local Indigenous Energy Supplies | Energy Self-Sufficiency | Lowest Long Term Cost |
|-----------------|-----------------------------------------|--------------------------------------------------|-----------------------------|----------------------------------|--------------------------|----------------------------------|-------------------------|-----------------------|
| Electricity | | | | | | | | ✓ |
| Heating/Cooking | | | | | | | | ✓ |
| Transportation | | | | | | | | ✓ |
| Residential | | | | | | | | ✓ |
| Commercial | | | | | | | | ✓ |
| Community | | | | | | | | ✓ |
| Anchorage | | | | | | | | ✓ |
| Railbelt | | | | | | | | ✓ |
| SouthCentral | | | | | | | | ✓ |
| Non-Railbelt | | | | | | | | ✓ |

Short, Medium, Long Term Solutions Examples

Attachment C

| Potential Policy Solutions | | | | | | | | | |
|----------------------------|------------------------------------------|-----------------------------------------|----------------------------------------|---------------------------------------|--------------------------------------|----------------------------------------------|---------------------------------|-------------------------------------------------|----------------------------|
| | Alleviate Short-Term Unforeseen Problems | Fuel Cost Hedging Strategies | Encourage Energy Conservation | Electric Intertie System Development | Distributed Energy vs Statewide Grid | Gas Pipeline From North Slope | Large Renewable Energy Projects | Royalty Hydrocarbon Set-Asides f/In-State Use | Electric/Nat. Gas Vehicles |
| Electricity | PCE Cap Adjusted with Energy Cost Index | State Finance Wizards Implement Hedging | Implement Grimason Report & AHFC Plans | Regional Intertie Systems Enhancement | | Mainline Offtakes - Bullet Line or Spur Line | Hydro/Wind/Geothermal? | State Sells at Less Than Highest Monetary Value | |
| Cooking | Subsidized Fuel | State Finance Wizards Implement Hedging | | | | Mainline Offtakes - Bullet Line or Spur Line | Biomass Hydro Geothermal | State Sells at Less Than Highest Monetary Value | |
| Heating | Subsidized Fuel | State Finance Wizards Implement Hedging | AHFC Plans | | | Mainline Offtakes - Bullet Line or Spur Line | Biomass Hydro Geothermal | State Sells at Less Than Highest Monetary Value | |
| Transportation | Subsidized Fuel | | Market Forces | | | | | State Sells at Less Than Highest Monetary Value | Refueling Infrastructure |
| Residential | ✓ | | ✓ | | ✓ | ✓ | ✓ | ✓ | |
| Commercial | ✓ | | ✓ | | ✓ | ✓ | ✓ | ✓ | |
| Community | ✓ | | ✓ | | ✓ | ✓ | ✓ | ✓ | |
| Anchorage | | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | | ✓ |
| Railbelt | | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ |
| Non-Railbelt | ✓ | ✓ | ✓ | ✓ | ✓ | ? | ? | ✓ | □ |

Scale Economies Exist But Collaboration Is Critical

- Railbelt Electrical Grid Authority
 - Are State Authorities the answer?
 - How many does the state need?
- Chugach/ML&P Joint Operations
 - Working towards first joint generation project
- Native Corps looking at regional organizations
- Rural Intertie projects – micro-grids make sense
- Major Cross-state interconnections?
- **We need consensus on long-term vision**

Energy Vision Requires Investment

- Large scale physical infrastructure investment – bigger than individual company abilities
- Large scale human infrastructure investment – educational institutions and programs
- Significant investment in incentives to encourage correct supply side and demand side responses
- Collaboration and consensus are keys to unlocking means to address challenges

Low Hanging Fruit

- Demand Side Response
 - Dramatic reduction in vehicle use once gasoline prices approached \$5/gallon in U.S.
 - Huge response to AHFC Weatherization and Rebate programs
- Can we do more?
 - AHFC Energy audit program excludes home electric use audits
 - Since energy raters going to homes anyway, why not include an electric appliance audit?

Impact of \$1,200 Rebate?

Choosing an Energy-Efficient TV

Which of the latest models are the greenest?

Digg [submit](#)

NT

GREEN TV: Some flat screen TVs draw more power than a large refrigerator. Beginning in November 2008, "Energy Star" labels will begin appearing on televisions to help consumers identify greener choices.

Getty Images

Annual Power Consumption of Household Appliances by Appliances per Household

Figure 3 - Comparative Power Consumption of Selected Household Appliances.

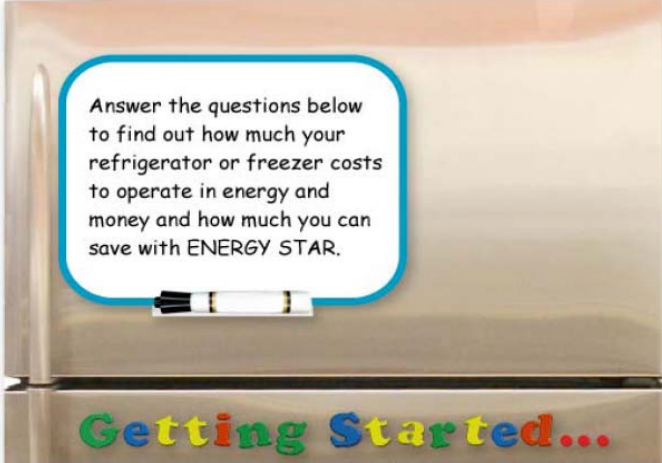

Television now ranks behind three already regulated product types: domestic refrigeration; space heating & cooling, together with water heating, as major contributors to greenhouse gas emissions from the stationary household sector.

Smith recommends green consumers consider the [Liquid Crystal Display](#) (LCD) models, which typically uses less energy than comparable plasma sets. According to the U.S. Environmental Protection Agency (EPA), a 28-inch conventional cathode-ray tube (CRT) set uses about 100 watts of electricity. A 42-inch LCD set might consume twice that amount, while plasma could use five times as much, depending on the model and the programming. For the largest

Pratt Audits His Home

Refrigerator Retirement Savings Calculator

Answer the questions below to find out how much your refrigerator or freezer costs to operate in energy and money and how much you can save with ENERGY STAR.

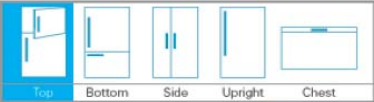

Getting Started...

1. I want to measure how much I could save if I:

- Replace my main refrigerator or freezer
- Remove my extra refrigerator or freezer

2. Find your [state's electricity price](#) per kilowatt hour or use the national average.
(Tip: Check your utility bill.)

3a. Describe Your Refrigerator or Freezer:

Approximate Model Year:

Capacity (or Size):

— OR —

3b. The model number of my refrigerator is:

(Enter only the first few model numbers for

Note: This calculator is available online.

Pratt's an Energy Pig

Refrigerator Retirement Savings Calculator

| |
|-----------------|
| 106.86115'2 |
| 19.1 cubic feet |
| Side-by-Side |
| \$0.105 |
| \$187.24 |
| 1,783 kWh |

START OVER

Your results...

You can **save more than \$675** over five years by replacing your old refrigerator or freezer with a new ENERGY STAR qualified model!

| | |
|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Your model costs... | An ENERGY STAR qualified model costs... |
|  |  |
| \$187 per year to run | \$52 per year to run |

Note: Pratt's old frig. is using 1,200 KWH/yr. more than a new one would.

APA Collaboration with AHFC?

- Can the electric utility industry leverage AHFC's energy audit program to “audit” the impact of electric appliance replacement?
- As long as energy raters are going to homes, how can we get homeowners to do an “appliance audit” without further burdening the raters?
- Can APA and AHFC figure out how this might work in conjunction with successful utility energy audit programs a la GVEA or ML&P?

Alaska and The World Face The Same Energy Facts

- Alaska is blessed with incredibly enormous potential energy resources
- Collaboration and consensus are the keys to success
- Working together we can achieve short term savings and long term goals – IF we agree on what those goals are.

Thank You
